

## Lindal

Inventing, developing and enhancing products for the benefit of the end customer is LINDAL's main target.

Based in Germany LINDAL has been in the business of manufacturing valves since 1959.

Today LINDAL develops and manufactures valves, actuators and spray-caps for all types of aerosol products. Its annual valve production has reached approximately 2 billion, which makes LINDAL one of the market leaders in this area. It has also expanded beyond Europe and is represented by subsidiaries and licensees in over 15 countries.

LINDAL has acquired skills in manufacturing bag-on-valves which provide perfect product insulation and can be used in all positions. Using compressed air as a propellant, they are also ecologically friendly.

Responding to customer needs LINDAL Group has now also established BOV production in North America, in Phoenix/Arizona.

The latest additions to LINDAL's range of standard actuators are CARLA and COZY:

Bi-injection actuator COZY stands for a complete new way to dispense cream and lotion. Its soft textured finger pad is the natural extension of your customer's forefinger. COZY is suitable for personal care and household products.

The soft curves of CARLA are ergonomically designed and provide a textured finger pad. CARLA is easy to use and adds a touch of sensuality to the experience of every final user. CARLA is suitable for antiperspirants, deodorants and all other kind of personal care and household products.
